

Dear Parents,

Did you know that –

- Spanking **shrinks brains.**

Harvard Medical School found that kids who are spanked just once a month had **14-19% smaller brains in the decision-making area.**¹ These were children who remembered being spanked at least 12 times a year and once with a belt, paddle or brush, but were not injured or spanked in anger.

- 1,574 studies found that **spanking is harmful.**

- Even ‘everyday spanking’ is **consistently associated with:**

- **More** aggression
- **More** negative relationships with parents
- **Lower** cognitive ability
- **Substance** abuse
- **More** fighting
- **Weaker** moral values
- **Delinquent** behavior
- **More** mental health problems
- **Lower** self-esteem
- **More** antisocial behavior
- **Lower** self-control²

- Spanking **lowers IQ.**

The University of New Hampshire found that American children who are spanked at ages 2-4 have **5 less IQ points** than non-spanked children, even years later. Children spanked at ages 5-9 have **2.8 less IQ points.**³

FREQUENTLY ASKED QUESTIONS

- **Does this mean that everyone who was spanked as a child has problems?** No, it means that spanking doesn’t help children learn what we want them to learn. Every time we spank a child, we raise the risk that the child will develop problems.
- **Why is this so?** Spanking focuses on the behavior and misses the underlying need. It might stop a child from doing something in the moment, but the child hasn’t learned how to do things differently. And it can lead to built-up resentment and hostility, and prevent some children from telling about sexual abuse for fear of further punishment.
- **But I was spanked and turned out okay?** Today, we have a tremendous amount of knowledge about how children learn and develop. We know other ways of teaching children that don’t have these risks and harms.

PARENTING PLEDGE

I, _____, pledge
to never use any form of physical discipline.

- I will not hit, spank, whip, or tap my child/children.
- I know that corporal punishment can harm my child's physical, intellectual, and psychological well-being, and that it can damage our relationship.
- I understand that science has proven that all forms of spanking are harmful, ineffective, and can have negative effects on children's brains.
- I pledge to use effective parenting alternatives that model that hitting is not an acceptable tool for parenting, leadership, or expressing emotions.
